Specification

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). The status of the parent application(s) and/or any other application(s) cross-referenced to this application, **if any**, should be updated in a timely manner.

Status of Claims

Claims 1 and 3-12 are pending in the instant application.

Claim Rejections - 35 USC § 112

Claims 1 and 3-12 are rejected under 35 U.S.C. 112, first paragraph, for the same reasons set forth in the previous office action.

With respect to these rejections, applicants argue that for both substances (the "alkaline agent" and the "hydration inhibitor"), the claims are enabled because the specification contains the broad terminology and this is sufficient to provide enablement.

The examiner disagrees. There are clearly situations where literal antecedent basis or support is insufficient. In the instant situation, it is clear that the terms "alkaline

Art Unit: 1755

agent", "activator" and "hydration inhibitor" embrace millions (if not more) of substances neither contemplated or disclosed by applicants and the skilled artisan would be required to undertake undue experimentation to determine the scope of this terminology. A list of one or two substances when taken with the breadth of the claimed terminology does not provide the artisan adequate direction as to the subject matter covered by the instantly claimed invention.

The rejection of the claims under the second paragraph of 35 U.S.C. 112 is hereby withdrawn.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

Art Unit: 1755

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 and 3-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. 5,779,786 to Patel or over GB 1,432,157, for the reasons set forth in the previous office action.

Applicants' arguments with respect to this rejection assert that the references do not teach mixing two components dispersed in an aqueous medium.

The examiner does not consider this argument to be relevant. With respect to the composition claims, the order of mixing has no bearing on the final composition absent some convincing showing of evidence to the contrary. This was already addressed on page 6 of the previous office action. Regarding the method claims, the

Art Unit: 1755

examiner also previously pointed out on page 6 of the previous office action that the order of addition of substances would clearly be a design choice and in fact indicated reasons why the skilled artisan might be motivated to change such steps. The applicants have not addressed the examiner's position.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth D. Wood whose telephone number is 571-272-1377. The examiner can normally be reached on M-F, 5:30-2:00.
